

## **Project: Symposium**

We will create a physics symposium here at school for other classes and teachers to come visit. At this symposium you will have a small space to present your work.

### **The work**

- Link physics with something important to you. This could be linking physics with sports, dance, movies, or work with exciting new advancements today.
- You will have to create an interactive presentation for your fellow panthers. This could be a simple poster, or a video, or a fully interactive creation.

### **Grading**

- Any competencies demonstrated in the presentation will count for marks
- You will also receive a bonus on your final grade based on the effort and quality of your work. This bonus is completely at the discretion of Mr. Horncastle and will be applied after final marks and not before.

**This is an individual project**

**Due: June 15th**
